Project Topic Assignment (revised)

- 1) General topic of interest in relation to the Oregon Bee Atlas data (e.g., patterns of diversity, bee diets, sampling bias) The topic of interest we are interested in is change in species composition
- 2) Potential questions within that topic area Potential questions I have thought of are: How has bee species composition changed following extreme weather events? How has species composition changed over time following extreme weather events in urban areas?
- 3) Potential additional datasets within that topic area (e.g., specify relevant government databases, academic data repositories, etc) We will be using the NOAA national weather dataset which incorporates time-stamped weather events so that we can compare bee species changes following short term extreme weather events.
- 4) The name of your partner The name of my partner is Ben Thompson.
